Welcome to the 21st Century

New computer science courses could be coming to your district!

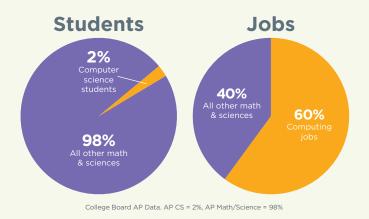

"Everybody in this country should learn how to program a computer... **because it teaches you how to think."** — Steve Jobs

Why Computer Science? Computer science opens more doors for students than any other discipline in today's world. Learning even the basics will help our students lead in virtually any career from architecture to zoology. Just as we teach students how to dissect a frog, or how electricity works, it's important for every 21st century student to have a chance to "dissect an app," or learn how the Internet works.

Don't miss out on the chance to open up a new future for your students. In these classes, students will learn to build technology, not just consume it. They'll imagine games, apps and programs and create them.

Partnership with Code.org

Code.org provides a full pathway for school districts to offer computer science, at no charge to the district or schools:

- Professional development for teachers (including stipends)
- Nationally-recognized courses and K-12 curriculum in a blended-learning environment
- Materials to promote computer science to parents and students
- Support for all grade levels, K-12

The K-12 Computer Science Program

Our program consists of three curriculum packages, each with corresponding teacher professional development. Together, these curricula and professional development represent a comprehensive approach to bringing K-12 computer science into schools.

Elementary School

The Elementary Computer Science Program consists of the following course modules for the specified grade ranges:

- Grades K-1: Elementary Computer Science 1
- Grades 2-3: Elementary Computer Science 2
- Grades 4-5: Elementary Computer Science 3

Course modules are taught within pre-existing classes and are 15 to 20 lessons each. They are designed to be implemented in a standard 45-50 minute class period and use a blended-learning approach in which online, self-guided, self-paced tutorials are used in conjunction with hands-on, "unplugged" lessons, in which students learn computing concepts without a computer.

Middle School

The Middle School Computer Science Program consists of interdisciplinary modules that combine computer science concepts with science and mathematics. The following courses are aligned with common state standards in science and mathematics, including the NGSS and CCSS:

- Computer Science in Science
- Computer Science in Mathematics

Lesson sets are designed to be woven into existing math and science courses, and will not add substantial instructional time. Each lesson is designed to be implemented in a standard 45-50 minute class period. Lessons are topical and should be used within the natural context of class.

High School

The High School Computer Science program includes courses representing years of research and development sponsored by the National Science Foundation. These courses are designed to broaden participation in secondary computer science and prepare students for postsecondary experiences related to computing or college majors in computer science.

• Exploring Computer Science

Exploring Computer Science (ECS) is a nationally recognized introductory computer science course. It includes curriculum, professional development and assessments. ECS is designed to promote an inquiry-based approach to foundational computer science concepts, and to highlight computational practices and problem-solving skills.

Computer Science Principles

Currently in a pilot phase leading to an AP[®] exam^{*} in academic year 2016-2017, this course is far more than a traditional introduction to programming. It is a rigorous, engaging and approachable course designed to teach students how computer science is transforming the world we live in and how they can use computer science in their own lives and studies.

All Code.org courses are designed as year-long courses for standard 45-50 minute class periods. Schools may use alternative scheduling formats as long as the course is completed in its entirety.

K-12 Professional Development Workshops

Code.org provides professional development for teachers at schools participating in the program, combining online and in-person workshops, and covers costs of stipends for teachers, travel, meals and workshops.

For high school teachers, the complete professional development package per teacher consists of four phases before and during the school year. For middle school teachers, it is three phases before and during the school year. Our elementary school professional development is executed through local affiliates.

How to participate

Sign your district up at http://code.org/district-partner

To participate, we ask school districts to:

- Offer one or both of Code.org's High School Computer Science courses and, at the district's option, elementary and middle school computer science
- Identify highly-motivated teachers who will teach new courses
- Provide travel support for teachers to alternate locations if a local workshop is unavailable
- Add courses to the master school schedule and ensure core credit
- Announce and market the courses to all parents and students
- Ensure you meet the minimal hardware and software needs (such as modern web browsers)
- Include counselors and principals from participating schools in professional development
- Sustain the program after the partnership ends
- Establish a Computer Science Program Director within your district
- Hold a district-wide Hour of Code™ event each year
- Allow Code.org and its evaluators to assess the program, including aspects of teacher professional development and student outcomes

Contact your district coordinator to secure a spot for your school at the forefront of CS education in the nation. We look forward to working together to bring computer science to every classroom in our nation!

Code.org is a 501(c)3 non-profit dedicated to expanding participation in computer science education by making it available in more schools, and increasing participation by women and underrepresented students of color. The Code.org vision is that every student in every school should have the opportunity to learn computer programming.
