

Support K-12 Computer Science Education in Arizona

Computer science drives job growth and innovation throughout our economy and society. Computing occupations are the **number 1 source of all new wages in the U.S.** and make up over half of all projected new jobs in STEM fields, making Computer Science one of the most in-demand college degrees. And computing is used all around us and in virtually every field. It's foundational knowledge that all students need. But computer science is marginalized throughout education. Only 35% of U.S. high schools teach any computer science courses and only 10% of STEM graduates study it. We need to improve access for all students, including groups who have traditionally been underrepresented.

Computer science in Arizona

- Arizona currently has **9,677 open computing jobs** (2.7 times the average demand rate in Arizona).
- The average salary for a computing occupation in AZ is **\$87,434**, which is significantly higher than the average salary in the state (\$48,160). The existing open jobs alone represent a **\$846,102,786 opportunity** in terms of annual salaries.
- Arizona had only **814 computer science graduates** in 2017; only **16%** were female.
- Only **1,108 exams were taken in AP Computer Science by high school students** in Arizona in 2018 (487 took AP CS A and 621 took AP CSP).
- Only 24% were female (21% for AP CS A and 26% for AP CSP); only 252 exams were taken by Hispanic or Latino students (69 took AP CS A and 183 took AP CSP); only 23 exams were taken by Black students (4 took AP CS A and 19 took AP CSP); only 8 exams were taken by American Indian or Alaska Native students (2 took AP CS A and 6 took AP CSP); only 1 exam was taken by Native Hawaiian or Pacific Islander students (0 took AP CS A and 1 took AP CSP).
- Only **65 schools** in AZ (20% of AZ schools with AP programs) offered an AP Computer Science course in 2017-2018 (12% offered AP CS A and 15% offered AP CSP), which is 13 more than the previous year. There are fewer AP exams taken in computer science than in any other STEM subject area.
- Universities in Arizona did not graduate a single new teacher prepared to teach computer science in 2016.
- According to a representative survey from Google/Gallup, school administrators in AZ support expanding

computer science education opportunities: 63% of principals surveyed think CS is just as or more important than required core classes. And one of their biggest barriers to offering computer science is the lack of funds for hiring and training teachers.

What can you do to support K-12 CS education in Arizona?

1. Nominate a teacher for a professional learning scholarship: www.code.org/nominate
2. Send a letter:
 - o To your school/district asking them to expand computer science offerings at every grade level: www.code.org/promote/letter
 - o To your elected officials asking them to support computer science education policy in Arizona: www.votervoice.net/Code/campaigns/58463/respond
3. Find out if your school teaches computer science or submit information about your school's offerings at www.code.org/yourschool.
4. Visit www.code.org/educate/3rdparty to find out about courses and curriculum from a variety of providers, including Code.org.
5. Visit www.code.org/promote/AZ to learn more about supporting computer science in your state.

Code.org's impact in Arizona

- In Arizona, Code.org's curriculum is used in
 - o 25% of elementary schools
 - o 22% of middle schools
 - o 8% of high schools
- There are 12,960 teacher accounts and 546,058 student accounts on Code.org in Arizona.
- Of students in Arizona using Code.org curriculum last school year,
 - o 45% attend high needs schools
 - o 15% are in rural schools
 - o 44% are female students
 - o 60% are underrepresented minority students (Black/African American, Hispanic/Latino, American Indian, or Hawaiian)
- Code.org, its regional partner(s) Arizona Science Center, Grand Canyon University, and Science Foundation Arizona, and 8 facilitators have provided professional learning in Arizona for
 - o 3,049 teachers in CS Fundamentals (K-5)
 - o 121 teachers in Exploring Computer Science or Computer Science Discoveries
 - o 62 teachers in Computer Science Principles

“Computer Science is a liberal art: it’s something that everybody should be exposed to and everyone should have a mastery of to some extent.”

— Steve Jobs

What can your state do to improve computer science education?

States and local school districts need to adopt a broad policy framework to provide all students with access to computer science. The following nine recommendations are a menu of best practices that states can choose from to support and expand computer science. Not all states will be in a position to adopt all of the policies. Read more about these 9 policy ideas at https://code.org/files/Making_CS_Fundamental.pdf and see our rubric for describing state policies at <http://bit.ly/9policiesrubric>.

- Arizona **has not** yet created a state plan for K-12 computer science. A plan that articulates the goals for computer science, strategies for accomplishing the goals, and timelines for carrying out the strategies is important for making computer science a fundamental part of a state's education system.
- Arizona is in the process of developing K-12 computer science standards.
- Arizona has allocated funding for rigorous computer science professional development and course support (with an emphasis on Native American students).
- Arizona has clear certification pathways for computer science teachers.
- Arizona **has not yet** established programs at institutions of higher education to offer computer science to preservice teachers. The computer science teacher shortage can be addressed by exposing more preservice teachers to computer science during their required coursework or by creating specific pathways for computer science teachers.
- Arizona **does not yet** have dedicated computer science positions in state or local education agencies. Creating a statewide computer science leadership position within the state education agency can help expand state-level implementation of computer science education initiatives. Similar positions at the local level could support districts' expansion of course offerings and professional development.
- Arizona **does not yet** require that all secondary schools offer computer science. The state can support the expansion of computer science courses by adopting policies that require schools to offer a computer science course based on rigorous standards, with appropriate implementation timelines and allowing for remote and/or in-person courses.
- Arizona has passed policy that is permissive and encouraging for schools to allow computer science to count for a core graduation requirement, but it is not a requirement for schools. Find out how Arizona allows computer science to count towards graduation at <http://bit.ly/9policies>.
- Arizona **does not yet** allow computer science to count as a core admission requirement at institutions of higher education. Admission policies that do not include rigorous computer science courses as meeting a core entrance requirement, such as in mathematics or science, discourage students from taking such courses in secondary education. State leaders can work with institutions of higher education to ensure credit and articulation policies align with secondary school graduation requirements.

Follow us!

Join our efforts to give every student in every school the opportunity to learn computer science. Learn more at code.org, or follow us on [Facebook](#) and [Twitter](#).

Launched in 2013, Code.org® is a nonprofit dedicated to expanding access to computer science, and increasing

participation by women and underrepresented students of color. Our vision is that every student in every school should have the opportunity to learn computer science.

Data is from the Conference Board for job demand, the Bureau of Labor Statistics for state salary and national job projections data, the College Board for AP exam data, the National Center for Education Statistics for university graduate data, the Gallup and Google research study Education Trends in the State of Computer Science in U.S. K-12 Schools for parent demand, the 2018 Computer Science Access Report for schools that offer computer science, and Code.org for its own courses, professional learning programs, and participation data.
