Support K-12 Computer Science Education in New Hampshire

Computer science drives job growth and innovation throughout our economy and society. Computing occupations are the number 1 source of all new wages in the U.S. and make up over half of all projected new jobs in STEM fields, making Computer Science one of the most in-demand college degrees. And computing is used all around us and in virtually every field. It’s foundational knowledge that all students need. But computer science is marginalized throughout education. Only 45% of U.S. high schools teach any computer science courses and only 10% of STEM graduates study it. We need to improve access for all students, including groups who have traditionally been underrepresented.

93% of parents want their child's school to teach computer science, but only 45% of high schools teach it.

50% of Americans rank computer science as one of the two most important subjects of study after reading and writing.

75% of Americans believe computer science is cool in a way it wasn't 10 years ago.

Students who learn computer science in high school are 6 times more likely to major in it, and women are 10 times more likely.

67% of parents and 56% of teachers believe students should be required to learn computer science.

Computer science in New Hampshire

- New Hampshire currently has 1,398 open computing jobs (1.5 times the average demand rate in New Hampshire).
- The average salary for a computing occupation in NH is $99,374, which is significantly higher than the average salary in the state ($52,350). The existing open jobs alone represent a $138,924,494 opportunity in terms of annual salaries.
- New Hampshire had only 586 computer science graduates in 2017; only 19% were female.
- In New Hampshire, only 49% of all public high schools teach computer science.
- Only 501 exams were taken in AP Computer Science by high school students in New Hampshire in 2019 (230 took AP CS A and 271 took AP CSP).
- Only 29% were female (23% for AP CS A and 34% for AP CSP); only 17 exams were taken by Hispanic or Latino students (7 took AP CS A and 10 took AP CSP); only 5 exams were taken by Black students (4 took AP CS A and 1 took AP CSP); no exams were taken by American Indian or Alaska Native students; no exams were taken by Native Hawaiian or Pacific Islander students.
- Only 28 schools in NH (24% of NH schools with AP programs) offered an AP Computer Science course in 2017-2018 (17% offered AP CS A and 12% offered AP CSP), which is 8 more than the previous year.
- Universities in New Hampshire did not graduate a single new teacher prepared to teach computer science in 2017.
- According to a representative survey from Google/Gallup, school administrators in NH support expanding computer science education opportunities: 66% of principals surveyed think CS is just as or more important than required core classes. And their biggest barrier to offering computer science is the lack of funds for hiring and training teachers.
What can you do to support K-12 CS education in New Hampshire?

1. Nominate a teacher for a professional learning scholarship: www.code.org/nominate
2. Send a letter:
   - To your school/district asking them to expand computer science offerings at every grade level: www.code.org/promote/letter
   - To your elected officials asking them to support computer science education policy in New Hampshire: www.votervoice.net/Code/campaigns/58463/respond
3. Find out if your school teaches computer science or submit information about your school's offerings at www.code.org/yourschool.
4. Visit www.code.org/educate/3rdparty to find out about courses and curriculum from a variety of providers, including Code.org.
5. Visit www.code.org/promote/NH to learn more about supporting computer science in your state.

Who can you connect with locally to talk about K-12 CS education policy?

- You can reach Code.org’s policy contact for your state, Amy Roberts, at amy.roberts@code.org.
- The Expanding Computing Education Pathways (ECEP) Alliance (www.ecepalliance.org), an NSF funded Broadening Participation in Computing Alliance, seeks to increase the number and diversity of students in computing and computing-intensive degrees by promoting state-level computer science education reform. ECEP supports 22 states and the territory of Puerto Rico to develop effective and replicable interventions to broaden participation in computing and to create state-level infrastructure to foster equitable computing education policies. You can reach your ECEP point of contact Rosabel Deloge at rosabel.deloge@gmail.com.

Code.org's impact in New Hampshire

- In New Hampshire, Code.org’s curriculum is used in
  - 22% of elementary schools
  - 27% of middle schools
  - 18% of high schools
- There are 1,719 teacher accounts and 71,026 student accounts on Code.org in New Hampshire.
- Of students in New Hampshire using Code.org curriculum last school year,
  - 16% attend high needs schools
  - 41% are in rural schools
  - 46% are female students
  - 20% are underrepresented minority students (Black/African American, Hispanic/Latino, American Indian, or Hawaiian)
- Code.org, its regional partner(s) UNH STEM Teachers' Collaborative, and 5 facilitators have provided professional learning in New Hampshire for
  - 232 teachers in CS Fundamentals (K-5)
  - 54 teachers in Exploring Computer Science or Computer Science Discoveries
  - 31 teachers in Computer Science Principles
“Computer Science is a liberal art: it’s something that everybody should be exposed to and everyone should have a mastery of to some extent.”

— Steve Jobs

What can your state do to improve computer science education?

States and local school districts need to adopt a broad policy framework to provide all students with access to computer science. The following nine recommendations are a menu of best practices that states can choose from to support and expand computer science. Not all states will be in a position to adopt all of the policies. Read more about these 9 policy ideas at https://code.org/files/Making_CS_Fundamental.pdf and see our rubric for describing state policies at http://bit.ly/9policiesrubric.

✔ New Hampshire has created a state plan for K-12 computer science.

✔ New Hampshire has established K-12 computer science standards.

☐ New Hampshire does not yet provide dedicated funding for rigorous computer science professional development and course support. Although funds may be available via broader programs, the state can strengthen its computer science programs by creating specific opportunities to bring computer science to school districts, such as matching fund programs.

✔ New Hampshire has clear certification pathways for computer science teachers.

✔ New Hampshire has established programs at institutions of higher education to offer computer science to preservice teachers.

✔ New Hampshire has a dedicated computer science position in the state education agency.

✔ New Hampshire requires that all secondary schools offer computer science.

✔ New Hampshire has passed policy that is permissive and encouraging for schools to allow computer science to count for a core graduation requirement, but it is not a requirement for schools. Find out how New Hampshire allows computer science to count towards graduation at http://bit.ly/9policies.

☐ New Hampshire does not yet allow computer science to count as a core admission requirement at institutions of higher education. Admission policies that do not include rigorous computer science courses as meeting a core entrance requirement, such as in mathematics or science, discourage students from taking such courses in secondary education. State leaders can work with institutions of higher education to ensure credit and articulation policies align with secondary school graduation requirements.

Follow us!

Join our efforts to give every student in every school the opportunity to learn computer science. Learn more at code.org, or follow us on Facebook and Twitter.

Launched in 2013, Code.org® is a nonprofit dedicated to expanding access to computer science, and increasing participation by women and underrepresented students of color. Our vision is that every student in every school should have the opportunity to learn computer science.

Data is from the Conference Board for job demand, the Bureau of Labor Statistics for state salary and national job projections data, the College Board for AP exam data, the National Center for Education Statistics for university graduate data, the Gallup and Google research study Education
Trends in the State of Computer Science in U.S. K-12 Schools for parent demand, the 2018 Computer Science Access Report for schools that offer computer science, and Code.org for its own courses, professional learning programs, and participation data.
