Support K-12 Computer Science Education in Virginia

Computer science drives job growth and innovation throughout our economy and society. Computing occupations are the number 1 source of all new wages in the U.S. and make up two-thirds of all projected new jobs in STEM fields, making Computer Science one of the most in-demand college degrees. And computing is used all around us and in virtually every field. It’s foundational knowledge that all students need. But computer science is marginalized throughout education. Fewer than half of U.S. schools offer any computer science courses and only 8% of STEM graduates study it. We need to improve access for all students, including groups who have traditionally been underrepresented.

93% of parents want their child's school to teach computer science, but only 40% of schools teach it.

75% of Americans believe computer science is cool in a way it wasn’t 10 years ago.

67% of parents and 56% of teachers believe students should be required to learn computer science.

50% of Americans rank computer science as one of the two most important subjects of study after reading and writing.

Students who learn computer science in high school are 6 times more likely to major in it, and women are 10 times more likely.

Computer science in Virginia

- Virginia currently has 32,045 open computing jobs (4.3 times the average demand rate in Virginia).
- The average salary for a computing occupation in VA is $102,773, which is significantly higher than the average salary in the state ($53,090). The existing open jobs alone represent a $3,293,360,785 opportunity in terms of annual salaries.
- Virginia had only 1,570 computer science graduates in 2015; only 18% were female.
- Only 2,856 high school students in Virginia took the AP Computer Science exam in 2016; only 24% were female; only 197 students were Hispanic or Latino; only 151 students were Black; only 6 students were Native American or Alaska Native; only 10 students were Native Hawaiian or Pacific Islander.
- Only 131 schools in VA (27% of VA schools with AP programs) offered the AP Computer Science course in 2015-2016. There are fewer AP exams taken in computer science than in any other STEM subject area.
- Universities in Virginia only graduated 2 new teachers prepared to teach computer science in 2016.
What can you do to improve K-12 CS education?

1. Call on your school to expand computer science offerings at every grade level.
2. Ask your local school district to allow computer science courses to satisfy a core math or science requirement.
3. Visit [www.code.org/educate/3rdparty](http://www.code.org/educate/3rdparty) to find out about courses and curriculum from a variety of third parties, including Code.org.
4. Visit [www.code.org/promote/VA](http://www.code.org/promote/VA) to learn more about supporting computer science in your state.
5. Sign the petition at [www.change.org/computerscience](http://www.change.org/computerscience) to join 100,000 Americans asking Congress to support computer science.

**Code.org's Impact in Virginia**

There are 9,860 teacher accounts and 318,498 student accounts on Code.org in Virginia.

Code.org, its regional partner(s) CodeVA, and 2 K-5 facilitators have provided professional learning for 1,156 teachers in CS Fundamentals (K-5), 141 teachers in Exploring Computer Science or Computer Science Discoveries, and 65 teachers in Computer Science Principles in Virginia.

“Computer Science is a liberal art: it’s something that everybody should be exposed to and everyone should have a mastery of to some extent.”

— Steve Jobs

**What can the federal government do to support computer science in grades K-12?**

Access to computer science courses is a bipartisan issue that can be addressed without adding to the Federal budget. Tell your representatives in Washington, D.C. that you support funding to expand access to this foundational 21st-century subject in your community that will America remain secure and globally competitive. Over 100,000 Americans, CEOs of the largest companies in every major industry, 29 governors, and major K-12 education leaders have all joined forces to call on Congress to support this idea. You can see their open letter (and add your name in support) at [www.change.org/computerscience](http://www.change.org/computerscience).

**What can your state do to improve computer science education?**
States and local school districts need to adopt a broad policy framework to provide all students with access to computer science. The following nine recommendations are a menu of best practices that states can choose from to support and expand computer science. Not all states will be in a position to adopt all of the policies. Read more about these 9 policy ideas at https://code.org/files/Making_CS_Fundamental.pdf and see our rubric for describing state policies at http://bit.ly/9policiesrubric.

☐ Virginia has not yet created a state plan for K-12 computer science. A plan that articulates the goals for computer science, strategies for accomplishing the goals, and timelines for carrying out the strategies is important for making computer science a fundamental part of a state’s education system.

☑ Virginia has established K-12 computer science standards.

☑ Virginia has allocated funding for rigorous computer science professional development and course support.

☑ Virginia has clear certification pathways for computer science teachers.

☑ Virginia has established programs at institutions of higher education to offer computer science to preservice teachers.

☐ Virginia does not yet have dedicated computer science positions in state or local education agencies. Creating a statewide computer science leadership position within the state education agency can help expand state-level implementation of computer science education initiatives. Similar positions at the local level could support districts’ expansion of course offerings and professional development.

☑ Virginia requires that all secondary schools offer computer science.

☑ Virginia allows computer science to count for a core graduation requirement. Find out how Virginia allows computer science to count towards graduation at http://bit.ly/9policies.

☐ Virginia does not yet allow computer science to count as a core admission requirement at institutions of higher education. Admission policies that do not include rigorous computer science courses as meeting a core entrance requirement, such as in mathematics or science, discourage students from taking such courses in secondary education. State leaders can work with institutions of higher education to ensure credit and articulation policies align with secondary school graduation requirements.

Follow us!

Join our efforts to give every student in every school the opportunity to learn computer science. Learn more at code.org, or follow us on Facebook and Twitter.

Launched in 2013, Code.org® is a non-profit dedicated to expanding access to computer science, and increasing participation by women and underrepresented students of color. Our vision is that every student in every school should have the opportunity to learn computer science.

Data is from the Conference Board for job demand, the Bureau of Labor Statistics for state salary and national job projections data, the College Board for AP exam data, the National Center for Education Statistics for university graduate data, the Gallup and Google research study Education Trends in the State of Computer Science in U.S. K-12 Schools for schools that offer computer science and parent demand, and Code.org for its own courses, professional learning programs, and participation data.
