Support K-12 Computer Science Education in West Virginia

Computer science drives job growth and innovation throughout our economy and society. Computing occupations are the **number 1 source of all new wages in the U.S.** and make up over half of all projected new jobs in STEM fields, making Computer Science one of the most in-demand college degrees. And computing is used all around us and in virtually every field. It’s foundational knowledge that all students need. But computer science is marginalized throughout education. Only 35% of U.S. high schools teach any computer science courses and only 10% of STEM graduates study it. We need to improve access for all students, including groups who have traditionally been underrepresented.

---

**93% of parents want their child’s school to teach computer science, but only 35% of high schools teach it.**

**75% of Americans believe computer science is cool in a way it wasn’t 10 years ago.**

**67% of parents and 56% of teachers believe students should be required to learn computer science.**

**50% of Americans rank computer science as one of the two most important subjects of study after reading and writing.**

**Students who learn computer science in high school are 6 times more likely to major in it, and women are 10 times more likely.**

---

**Computer science in West Virginia**

- West Virginia currently has **1,190 open computing jobs** (3.1 times the average demand rate in West Virginia).
- The average salary for a computing occupation in WV is **$71,150**, which is significantly higher than the average salary in the state ($40,250). The existing open jobs alone represent a **$84,668,500 opportunity** in terms of annual salaries.
- West Virginia had only **202 computer science graduates** in 2017; only **15%** were female.
- Only **255 exams were taken in AP Computer Science by high school students** in West Virginia in 2018 (101 took AP CS A and 154 took AP CSP).
- Only **31%** were female (27% for AP CS A and 33% for AP CSP); only 5 exams were taken by Hispanic or Latino students (3 took AP CS A and 2 took AP CSP); only 4 exams were taken by Black students (3 took AP CS A and 1 took AP CSP); no exams were taken by American Indian or Alaska Native students; no exams were taken by Native Hawaiian or Pacific Islander students.
- Only **25 schools** in WV (20% of WV schools with AP programs) offered an AP Computer Science course in 2017-2018 (10% offered AP CS A and 14% offered AP CSP), which is 10 more than the previous year. There are fewer AP exams taken in computer science than in any other STEM subject area.
- Universities in West Virginia did not graduate a single new teacher prepared to teach computer science in 2016.
According to a representative survey from Google/Gallup, school administrators in WV support expanding computer science education opportunities: 64% of principals surveyed think CS is just as or more important than required core classes. And one of their biggest barriers to offering computer science is the lack of funds for hiring and training teachers.

What can you do to support K-12 CS education in West Virginia?

1. Nominate a teacher for a professional learning scholarship: www.code.org/nominate
2. Send a letter:
   - To your school/district asking them to expand computer science offerings at every grade level: www.code.org/promote/letter
   - To your elected officials asking them to support computer science education policy in West Virginia: www.votervoice.net/Code/campaigns/58463/respond
3. Find out if your school teaches computer science or submit information about your school's offerings at www.code.org/yourSchool.
4. Visit www.code.org/educate/3rdparty to find out about courses and curriculum from a variety of providers, including Code.org.
5. Visit www.code.org/promote/WV to learn more about supporting computer science in your state.

Code.org's impact in West Virginia

- In West Virginia, Code.org's curriculum is used in 12% of elementary schools, 11% of middle schools, and 8% of high schools.
- There are 1,955 teacher accounts and 83,823 student accounts on Code.org in West Virginia.
- Of students in West Virginia using Code.org curriculum last school year,
  - 36% attend high needs schools
  - 43% are in rural schools
  - 44% are female students
  - 18% are underrepresented minority students (Black/African American, Hispanic/Latino, American Indian, or Hawaiian)
- Code.org, its regional partner(s) West Virginia University, and 7 facilitators have provided professional learning in West Virginia for 202 teachers in CS Fundamentals (K-5), 45 teachers in Exploring Computer Science or Computer Science Discoveries, and 30 teachers in Computer Science Principles.

“Computer Science is a liberal art: it’s something that everybody should be exposed to and everyone should have a mastery of to some extent.”
What can your state do to improve computer science education?

States and local school districts need to adopt a broad policy framework to provide all students with access to computer science. The following nine recommendations are a menu of best practices that states can choose from to support and expand computer science. Not all states will be in a position to adopt all of the policies. Read more about these 9 policy ideas at https://code.org/files/Making_CS_Fundamental.pdf and see our rubric for describing state policies at http://bit.ly/9policiesrubric.

- West Virginia has not yet created a state plan for K-12 computer science. A plan that articulates the goals for computer science, strategies for accomplishing the goals, and timelines for carrying out the strategies is important for making computer science a fundamental part of a state’s education system.

- West Virginia has established K-12 computer science standards.

- West Virginia does not yet provide dedicated funding for rigorous computer science professional development and course support. Although funds may be available via broader programs, the state can strengthen its computer science programs by creating specific opportunities to bring computer science to school districts, such as matching fund programs.

- West Virginia has clear certification pathways for computer science teachers.

- West Virginia has not yet established programs at institutions of higher education to offer computer science to preservice teachers. The computer science teacher shortage can be addressed by exposing more preservice teachers to computer science during their required coursework or by creating specific pathways for computer science teachers.

- West Virginia does not yet have dedicated computer science positions in state or local education agencies. Creating a statewide computer science leadership position within the state education agency can help expand state-level implementation of computer science education initiatives. Similar positions at the local level could support districts’ expansion of course offerings and professional development.

- West Virginia requires that all secondary schools offer computer science.

- West Virginia allows computer science to count for a core graduation requirement. Find out how West Virginia allows computer science to count towards graduation at http://bit.ly/9policies.

- West Virginia does not yet allow computer science to count as a core admission requirement at institutions of higher education. Admission policies that do not include rigorous computer science courses as meeting a core entrance requirement, such as in mathematics or science, discourage students from taking such courses in secondary education. State leaders can work with institutions of higher education to ensure credit and articulation policies align with secondary school graduation requirements.

Follow us!

Join our efforts to give every student in every school the opportunity to learn computer science. Learn more at code.org, or follow us on Facebook and Twitter.

Launched in 2013, Code.org® is a nonprofit dedicated to expanding access to computer science, and increasing
participation by women and underrepresented students of color. Our vision is that every student in every school should have the opportunity to learn computer science.

Data is from the Conference Board for job demand, the Bureau of Labor Statistics for state salary and national job projections data, the College Board for AP exam data, the National Center for Education Statistics for university graduate data, the Gallup and Google research study Education Trends in the State of Computer Science in U.S. K-12 Schools for parent demand, the 2018 Computer Science Access Report for schools that offer computer science, and Code.org for its own courses, professional learning programs, and participation data.
