Computer science drives job growth and innovation throughout our economy and society. Computing occupations are the number 1 source of all new wages in the U.S. and make up over half of all projected new jobs in STEM fields, making Computer Science one of the most in-demand college degrees. And computing is used all around us and in virtually every field. It’s foundational knowledge that all students need. But computer science is marginalized throughout education. Only 35% of U.S. high schools teach any computer science courses and only 8% of STEM graduates study it. We need to improve access for all students, including groups who have traditionally been underrepresented.

Support K-12 Computer Science Education in West Virginia

Computer science in West Virginia

- West Virginia currently has 1,162 open computing jobs (3.8 times the average demand rate in West Virginia).
- The average salary for a computing occupation in WV is $71,150, which is significantly higher than the average salary in the state ($40,250). The existing open jobs alone represent a $82,676,300 opportunity in terms of annual salaries.
- West Virginia had only 158 computer science graduates in 2015; only 11% were female.
- Only 246 exams were taken in AP Computer Science by high school students in West Virginia in 2017 (128 took AP CS A and 118 took AP CSP).
- Only 36% were female (34% for AP CS A and 38% for AP CSP); only 7 exams were taken by Hispanic or Latino students (2 took AP CS A and 5 took AP CSP); only 2 exams were taken by Black students (0 took AP CS A and 2 took AP CSP); only 1 exam was taken by American Indian or Alaska Native students (1 took AP CS A and 0 took AP CSP); no exams were taken by Native Hawaiian or Pacific Islander students.
- Only 15 schools in WV (12% of WV schools with AP programs) offered an AP Computer Science course in 2016-2017 (7% offered AP CS A and 7% offered AP CSP). There are fewer AP exams taken in computer science than in any other STEM subject area.
- Universities in West Virginia did not graduate a single new teacher prepared to teach computer science in 2016.
What can you do to improve K-12 CS education?

1. Call on your school to expand computer science offerings at every grade level.
2. Ask your local school district to allow computer science courses to satisfy a core math or science requirement.
3. Visit [www.code.org/educate/3rdparty](http://www.code.org/educate/3rdparty) to find out about courses and curriculum from a variety of third parties, including Code.org.
4. Visit [www.code.org/promote/WV](http://www.code.org/promote/WV) to learn more about supporting computer science in your state.
5. Sign the petition at [www.change.org/computerscience](http://www.change.org/computerscience) to join 100,000 Americans asking Congress to support computer science.

**Code.org's Impact in West Virginia**

- In West Virginia, Code.org’s curriculum is used in
  - 12% of elementary schools
  - 11% of middle schools
  - 8% of high schools
- There are 1,792 teacher accounts and 75,719 student accounts on Code.org in West Virginia.
- Of students in West Virginia using Code.org curriculum last school year,
  - 36% attend high needs schools
  - 43% are in rural schools
  - 44% are female students
  - 18% are underrepresented minority students (Black/African American, Hispanic/Latino, American Indian, or Hawaiian)
- Code.org, its regional partner(s) West Virginia University, and 7 facilitators have provided professional learning in West Virginia for
  - 197 teachers in CS Fundamentals (K-5)
  - 45 teachers in Exploring Computer Science or Computer Science Discoveries
  - 30 teachers in Computer Science Principles

“Computer Science is a liberal art: it’s something that everybody should be exposed to and everyone should have a mastery of to some extent.”

— Steve Jobs
**What can your state do to improve computer science education?**

States and local school districts need to adopt a broad policy framework to provide all students with access to computer science. The following nine recommendations are a menu of best practices that states can choose from to support and expand computer science. Not all states will be in a position to adopt all of the policies. Read more about these 9 policy ideas at [https://code.org/files/Making_CS_Fundamental.pdf](https://code.org/files/Making_CS_Fundamental.pdf) and see our rubric for describing state policies at [http://bit.ly/9policiesrubric](http://bit.ly/9policiesrubric).

- West Virginia has not yet created a state plan for K-12 computer science. A plan that articulates the goals for computer science, strategies for accomplishing the goals, and timelines for carrying out the strategies is important for making computer science a fundamental part of a state’s education system.

- West Virginia has established K-12 computer science standards.

- West Virginia does not yet provide dedicated funding for rigorous computer science professional development and course support. Although funds may be available via broader programs, the state can strengthen its computer science programs by creating specific opportunities to bring computer science to school districts, such as matching fund programs.

- West Virginia has clear certification pathways for computer science teachers.

- West Virginia has not yet established programs at institutions of higher education to offer computer science to preservice teachers. The computer science teacher shortage can be addressed by exposing more preservice teachers to computer science during their required coursework or by creating specific pathways for computer science teachers.

- West Virginia has not yet have dedicated computer science positions in state or local education agencies. Creating a statewide computer science leadership position within the state education agency can help expand state-level implementation of computer science education initiatives. Similar positions at the local level could support districts’ expansion of course offerings and professional development.

- West Virginia requires that all secondary schools offer computer science.

- West Virginia does not yet allow computer science to count as a core admission requirement at institutions of higher education. Admission policies that do not include rigorous computer science courses as meeting a core entrance requirement, such as in mathematics or science, discourage students from taking such courses in secondary education. State leaders can work with institutions of higher education to ensure credit and articulation policies align with secondary school graduation requirements.

**Follow us!**

Join our efforts to give every student in every school the opportunity to learn computer science. Learn more at [code.org](http://code.org), or follow us on [Facebook](http://www.facebook.com) and [Twitter](http://twitter.com).

Launched in 2013, Code.org® is a non-profit dedicated to expanding access to computer science, and increasing participation by women and underrepresented students of color. Our vision is that every student in every school should have the opportunity to learn computer science.
Data is from the Conference Board for job demand, the Bureau of Labor Statistics for state salary and national job projections data, the College Board for AP exam data, the National Center for Education Statistics for university graduate data, the Gallup and Google research study Education Trends in the State of Computer Science in U.S. K-12 Schools for schools that offer computer science and parent demand, and Code.org for its own courses, professional learning programs, and participation data.
